BIOGRAPHY & ACADEMIC BACKGROUND

Bridging Quantitative Analysis & Literary History

Dr Catherine Wong is a scholar of Early Modern English literature and Digital Humanities, specialising in computational stylistics, authorship attribution, and text mining historical vernaculars.

Holding a PhD in English from the University of Liverpool, Dr Wong's research explores how computational methods, such as frequency distribution, word-based correlations, and semantic parsing, can reveal new insights into 16th and 17th-century English print culture, anonymous pamphlet networks, and theatre collaborations.

SCHOLARSHIP & OUTPUTS

Publications

CONFERENCE TALKS & KEYNOTES

Presentations

DIGITAL HUMANITIES TOOLS

Computing Humanities with Criticality

DramaScope 1.0

An interactive computational drama analytics platform for network analysis, character speech co-occurrence, and scene-by-scene structural decomposition in Renaissance theatre.

Designed to analyse dialogue distribution, dramatic tension, and character prominence across Early Modern plays and collaborations.

[Visit →](#)

CORE FEATURES

- Dynamic Character Interaction Network Graphs
- Scene-by-scene dramatic pacing & speech length matrix
- Co-occurrence matrix for multi-author play attribution

Text Visualiser

A real-time computational text analysis workbench calculating Type-Token Ratios (lexical richness), archaic vocabulary density indices, and average syllable distributions.

Built with live HTML5 Canvas frequency charts for Early Modern English prose, speech, and poetry.

[Visit →](#)

CORE FEATURES

- Live Type-Token Ratio (TTR) lexical richness scoring
- Early Modern orthographic archaism dictionary scanner
- Interactive canvas bar charts with custom text support

Sherlock Holmes' Door

CORE FEATURES

A forensic stylometry and textual genetics attribution suite applying Delta distance metrics and rolling window stylometry to Victorian and Early Modern crime fiction. Used for uncovering pseudonymous authors, collaborative magazine entries, and editorial hand signatures in anonymous print.

[Visit →](#)

- Burrows' Delta & Eder's Delta stylometric distance calculation
- Rolling SVM classifier for detecting shifts in authorship
- Forensic author signature probability density maps

PEDAGOGY & MODULES

Teaching

University Modules Taught

ENG3041

Python for Literary Stylistics & Text Mining

Postgraduate MA module introducing NLTK, spaCy, and computational methods for analysing historical text corpora.

ENG2012

Early Modern Literature & Print Culture (1550–1680)

Undergraduate honors module examining Spenser, Shakespeare, Donne, and the rise of commercial print in London.

DH1001

Introduction to Digital Humanities Methods

Core undergraduate course covering TEI encoding, spatial humanities, and quantitative literary studies.

GET IN TOUCH

Contact & Office Hours

Dr Wong welcomes inquiries regarding prospective PhD supervision in Digital Humanities, collaborative research grants, keynotes, and media comments on Early Modern literature.

EMAIL ADDRESS

catherine.wong@sheffield.ac.uk

OFFICE & HOURS

2/F, Mappin Building

Tuesdays 14:00 – 15:00
